## **Barcode scanning and stocktaking**

## Added: Version 4.01

During a stocktake, it is possible to save a lot of time and increase accuracy by using barcode scanners to scan stock instead of manually counting it.

Stocktaking with barcode scanners is a little different to doing it without them. With barcode scanners, the assumption is that you will go to a particular location in your warehouse and then scan everything in that location. As you scan, mSupply counts the stock in that location. This means two things:

- 1. You must tell mSupply which warehouse location you are currently counting
- 2. When first created, a stocktake with barcode scanning turned on has a zero in the *Counted number of packs* column for every line. Without barcode scanning turned on, the *Counted number of packs* is set to the *Snapshot number of packs* when it is first created.

Here's how it all works.

Create a stocktake in the usual way (see Stocktakes for details). The stocktake window is exactly the same as when not using barcode scanners, except that the item filter has changed to a location filter:

D	escription 2	8/01/2019 Stoc	k take				Stock tak	e number 5
Comment					Stock take entered date 28/01/2019			
Stock take date 28/01/2019					Stock take status sg			
New line	Del	ste line(s)	Print Create Inventory adjustments Order by		Scanning for lo	cation at		
eneral	Log		aqusanens					
Line number	Location	item code	Item name	Batch	Expiry	Snapshot number of packs	Pack Size	Counted number of packs
1	a1	test01	test item 01	rtyu65478	31/05/2024	2000	1	0
5	a1	test01	test item 01	BLA7J71	30/09/2020	2250	1	0
< Locked			S					>

Edit the *Description* and *Stocktake date* fields as required as usual and enter any comments in the *Comment* field. Now enter the location you are going to count in the *Scanning for location* field. As you type the location name, the lines that have locations starting with what you have typed remain displayed in the table, all others are hidden (The line's locations are shown in the *Location* column). What you enter in the *Scanning for location* field must result in lines for a single location only being

displayed in the table. If you start scanning before this is the case you will be shown a warning message and nothing will be counted.

Note:

- The Scanning for location field is not case sensitive
- You can enter "none" in the *Scanning for location* field if you want to count the lines that have no location. Very handy if you don't use locations in your warehouse.

When you have correctly entered the location you want to count in the *Scanning for location* field, you can start scanning the physical stock in that warehouse location. Be careful to scan the correct GS1 barcodes on the stock. mSupply will ignore anything you scan that is not GS1 compliant.

There are a number of possible outcomes of the scan:

Scan result	What mSupply does	What you should do
The barcode you scanned matches one of the lines in the location you are scanning for	The line's <i>Counted number of packs</i> value is increased by 1	Keep on scanning!
The barcode matches a line in the stocktake that is not in the current location	mSupply asks you whether you want to move the line to the current location. If you say yes, the line's location is changed to the current location and its <i>Counted number of packs</i> value is increased by 1. If you say no, the	
The barcode is not a valid GS1 barcode	mSupply displays an error message and the scan is ignored	
The barcode is a valid GS1 barcode but it is not registered against an item in mSupply	mSupply displays a warning message and ignores the scan
