24.08. Changing users and passwords

Changing the current user

From the menus choose **File > Change User...** (Keyboard shortcut **Ctrl+1**)

This logs out the current user and re-opens the login window so that the new user can login, without having to close and reopen mSupply:

1 5	Log-in – 🗆 🗙
Search users 1. Click on your name in the list User 1 (pess= user1) user2 user3	Log-in – 2. Enter your password 3. Choose store if available General 4. Choose login mode if available Store 5. Check any messages Connecting to data file on server: C:\mSupply \Database\mSupply.4DD
v	6. Click the OK button to proceed Quit OK

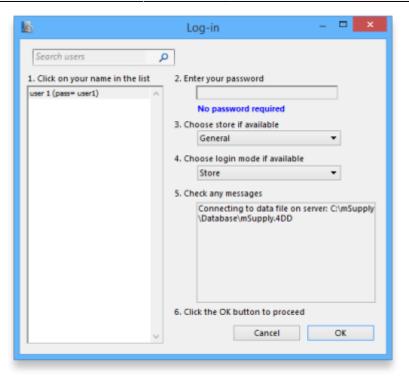

If more than one user is sharing your computer, choose this item before you leave the computer so that the next user will have to log in with their user name & password before gaining access.

If you find yourself on this page accidentally and if you do not have sufficient permissions to change to another store or user then you will have to close and restart mSupply by clicking Quit or the red X at the top right of the screen and launching the program again.

Switching stores

From the menus choose **File > Switch...** (Shortcut **Ctrl+2**)

This menu item lets a user (whose permissions allow) switch stores without the need to re-enter their password. Note that this screen does not allow a change of user; clicking on the **Cancel** button reverts to the current store, so caution in using this feature should be exercised, and this screen should not be displayed when the computer is left unattended (the user is **not** logged out).

Change password or language

From the menus choose File > Change Password or language....

This allows you to change your password or the language of the interface and will show you this window:

	Edit password	
Ente	er old password	
Ч		J
Ente	r new password	
Ente	r new password again	
Lang	guage	
En	glish ᅌ	
	Cancel OK	
_	Cancel	

To change your password:

- 1. In **Enter old password** enter your current password.
- 2. In **Enter new password** enter your new password. Make it long enough (at least 6 characters) and not easily guessed by people who know you.
- 3. In Enter new password again enter your new password again to make sure you have typed it

correctly.

- Passwords are case sensitive; make sure you don't have *Caps Lock* on.
 If you forget your password you must ask another user
 - If you forget your password you must ask another user who has permission to Edit users to change your password for you - see Changing the current user for details.

Edit users

See Managing users
