

# 10.01. Dispensary mode

**Dispensary mode** allows you to use mSupply to issue medicines to patients. It is ideally suited for pharmacies, clinics, hospital dispensaries, and facilities where medicines are supplied to individual patients.

The particular benefits of using Dispensary mode include:

- Prescription data can be entered into mSupply including:
  - [Patient details](#)
  - [Prescriber details](#)
  - [Prescribed items](#)
  - [Item directions](#) which can be quickly selected from standard abbreviations, and edited as necessary. Item directions do not need to be printed in English.
- **Labels** can be printed with:
  - Item description and quantity issued
  - Patient name
  - Prescriber name
  - Directions
  - Institution name
  - More...
- [Patient Histories](#) are recorded, allowing repeat prescriptions to be:
  - [Duplicated](#)
  - [Repeated](#)

- Use of Dispensary mode depends on your mSupply registration type. Contact Sustainable Solutions if you wish to upgrade your registration.
- Regardless of mode, each user can only use those functions for which they have permission, according to the permissions set for that user. See [Managing Users](#)
- In client-server versions of mSupply, different users can be logged in in different modes at the same time, allowing you to dispense to patients and supply wards, stores, clients or cost centres simultaneously.
- Users whose permissions allow them to operate in either Store mode or Dispensary mode may change from one to the other by pressing *Ctrl+2* on the keyboard. Re-entry of the user's password is not necessary.

## Activating dispensary mode

Prior to version 3.5 you controlled dispensary mode for each user, and had to choose **File > Edit users...**  
Now it's a setting for a store.

1. Click **Special > Show stores...**
2. Double-click on the store you want to set to dispensary mode.
3. Select **Dispensary** in the drop down list next to the store's code field.
4. Log out of the store and log in again to activate dispensary mode.

## Setting dispensary mode preferences

Click **Admin > Preferences > Dispensary mode** to set preferences.

Important preferences to consider:

- Ensure the **Show direction entry in dispensary** box is ticked.
- Specify what information will be printed on **dispensing labels**.
- Specify if you want a **receipt** to automatically print on labels.
- Specify if you want mSupply to **auto-generate patient codes** (alternatively, the user must enter a unique code for each patient).
- Specify if a **prescriber** must be entered for each prescription.
- Specify if you want to be able to **receive payments** from the prescription window.

The screenshot shows the 'Preferences...' dialog box with the 'Dispensary mode' section selected in the left sidebar. The 'Dispensary mode' option is highlighted with a red box. The main area contains several sections with checkboxes and text fields:

- Label Printing**
  - Message on labels: [text field]
  - Custom identification code to print on labels: [text field]
  - Printing options for units: [dropdown menu: Always print units]
  - ☒ Show direction entry in dispensary (highlighted with a red box)
  - ☐ Turn off cell padding in between direction and patient name
  - ☐ Print full prescriber name on labels
  - ☐ Print organisation Address 1 as separate line
  - ☐ Print patient category on label
  - ☐ Print Expiry Date of Item on label
  - ☐ Print sales value of Item on label
  - ☐ Print patient code on label
  - ☐ Print batch on label
  - ☐ Don't print placeholder lines
  - ☒ Print a receipt on labels by default (highlighted with a red box)
- Patients**
  - Default patient category: [text field]
  - Default prescriber name: Search Prescriber [text field]
  - ☒ Auto-generate patient code (highlighted with a red box)
  - Prefix codes with: [text field]
  - ☐ Capitalize patient names (shift overrides)
  - ☒ Prescriber must be entered (highlighted with a red box)
  - ☐ Expand abbreviations in patient address fields
  - ☐ Share patient prescription over stores
- Apply stock to placeholder lines**
  - From: 1/11/19 To: 1/11/19 Today [dropdown menu]
  - Apply stock [button]
- Payments**
  - ☐ Default prescription status to finalised
  - ☒ Receive payments from prescription window (highlighted with a red box)

Buttons: Cancel, OK

## What is a "name"?

In mSupply a "name" can be a customer, a supplier, both or neither. A "customer" can be anyone you supply goods to - e.g. another organisation, or a ward in your hospital, or a patient.

## What changes in dispensary mode?

### Different menus

Some of the menus in dispensary mode have different names. For example, the *Customer menu* becomes the *Patient menu*.

But most of the things you can do in store mode are also available in dispensary mode. In fact, the navigator looks much the same. The only difference is the Customers tab, which is renamed to the Patients tab and has a slightly different selection of icons:

The functionality of the common icons is the same as in store mode and applies mostly to customers not patients (a dispensary mode store can still distribute stock to customers (not patients) and handle customers' requisitions). For details of those functions, see the other sections of this guide.

## Different windows

The windows displayed are appropriate for dispensing medicines to individual patients.

A patient's dispensing history is maintained and you can also record patient notes (e.g. allergies).
