

What Do I need to set up mSupply mobile on a tablet

We have three stages to make your tablet ready to go with mSupply Mobile.

First

1. Need to setup the Mobile Store in mSupply desktop.

- mSupply team will help you to do this but the information that you need to provide to us are:

1. Store Name (eg mobile clinic)
2. Master list
3. Sync site name

2. And few things to do by the user:

- Create the users and password in mSupply desktop to login into your mSupply mobile in tablet.

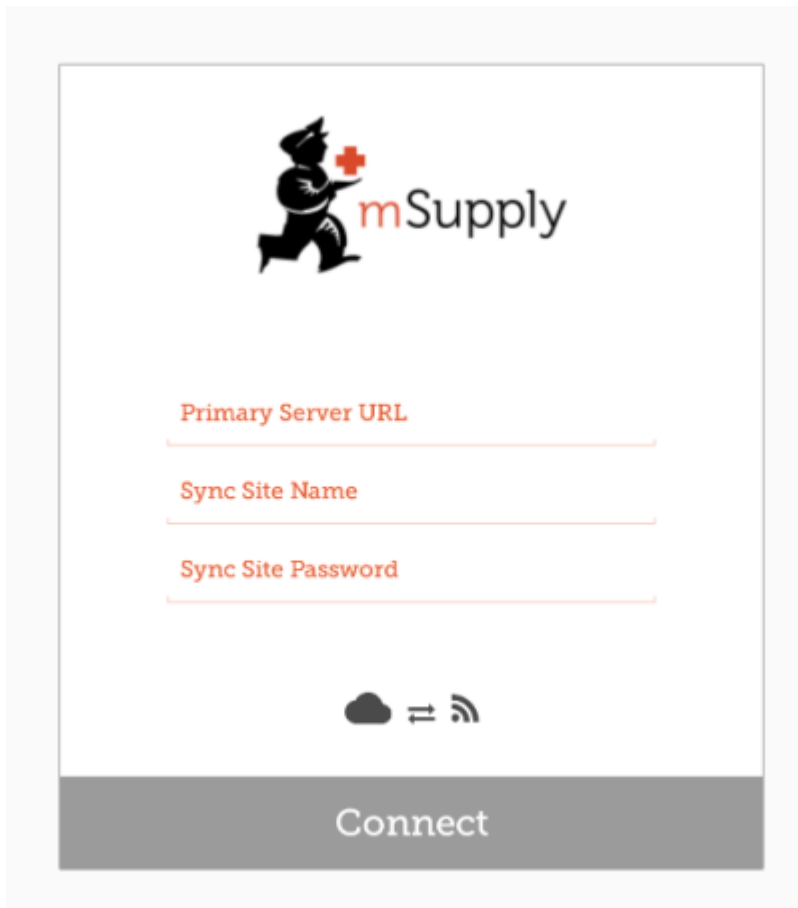

Guide to create the users in mSupply server. [Managing users](#)

Second

1. Download the apk file of mSupply Mobile Apps in your tablet from the given link. Check with Sustainable Solution for the download link. Depending on your mSupply server version, you may require specific version of mSupply version.

2. Once the download is completed it will ask the three things:

- Primary Server URL: <https://mSupply.demo.org:2048> (may look something like this, will depend on the client)
- Sync Site Name: Patan_hos (as example, Sustainable Solutions will provide)
- Sync Site Password: GreatMedicine (as example, Sustainable Solutions will provide)

3. Now the sync will start and be patient until the sync gets complete. Please make sure that the internet is stable; otherwise, it may lead to an incomplete sync.

Third

1. After the sync completion, another page will open asking for two things to login:

- Username: DonaldTrump (This fellow would be the store keeper at Patan Hospital)
- Password: NuclearWar
