

Procedures

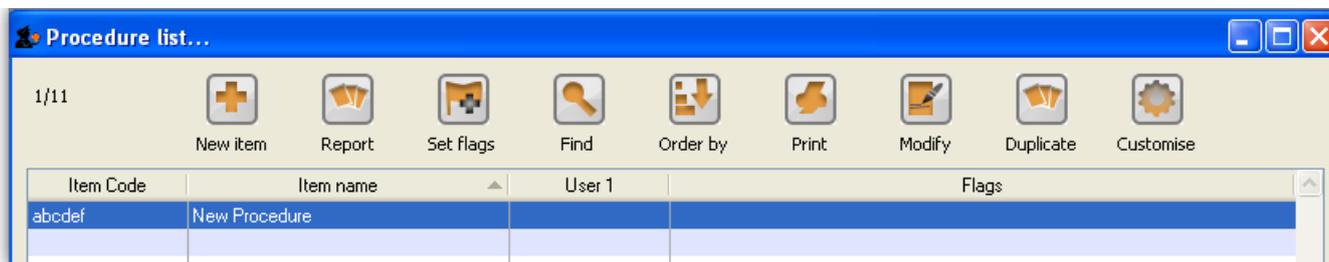

*

<note>Internally, a procedure in HIS is treated like a service item in mSupply, so many of the same concepts apply - see [Items](#)</note>

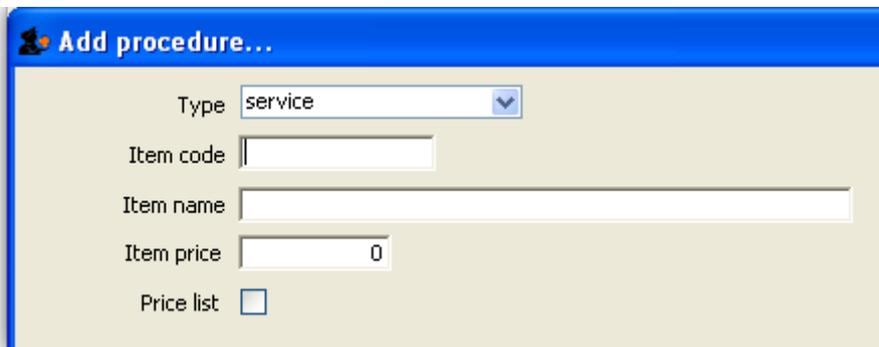

The **Special > Show procedures** menu item allows you to track surgical and other procedures performed on patients. It brings up the following window:

After setting the parameters, and clicking on OK, it will either show the list of procedures:

in which case, you can double-click on a procedure to view/edit it or select *New item* to create a new one. Or, if there are no existing procedures, it will go straight to the *Add procedure* window:

The type of a procedure is fixed as “service”. As for items, once a procedure has been added, there are extra fields and tabs available. However, only a subset of the normal item fields are available.

The screenshot shows a software window titled "Procedure details...". On the left is a sidebar with a tree view containing "General", "Usage", "Ledger", "Notes", "Misc", and "Misc 2". The main area is titled "Item name New Procedure" and has a "Store:" dropdown menu set to "Hospital Info System". It is divided into several sections: "General..." with fields for "Item code" (value: abcdef), "Category" (value: None), "Item flag", and "Catalogue code", plus a "Hide in this store" checkbox; "Pricing" with "Default margin" (value: 0) and "Default price" (value: 2,000.00); "Full description" with a large text area; and "Custom fields..." with seven input fields labeled "user_field_1" through "user_field_7", each with a checkbox to its right.
