

# Procedures

Internally, a procedure in HIS is treated like a service item in mSupply, so many of the same concepts apply - see [Items](#)

The **Special > Show procedures** menu item allows you to track surgical and other procedures performed on patients. It brings up the following window:

After setting the parameters, and clicking on OK, it will either show the list of procedures:

Item Code	Item name	User 1	Flags
abcdef	New Procedure		

in which case, you can double-click on a procedure to view/edit it or select *New item* to create a new one. Or, if there are no existing procedures, it will go straight to the *Add procedure* window:

The type of a procedure is fixed as “service”. As for items, once a procedure has been added, there are extra fields and tabs available. However, only a subset of the normal item fields are available.
