17.04. Importing prescribers

You need to be logged in to the store (dispensary) where the prescribers will prescribe before carrying out these steps.

Applicable in Dispensary mode only

From the File menu, choose Import Prescribers, and the Import alert window is displayed.

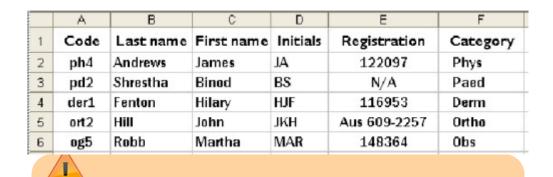

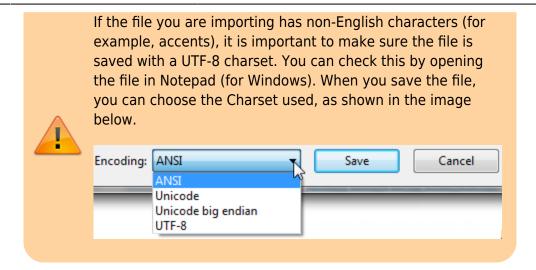

You may import a list of prescribers who have the authority to prescribe medicines.

Your list should be in the format of a 6-column spreadsheet, saved as a tab delimited file. The columns should be in the following order:

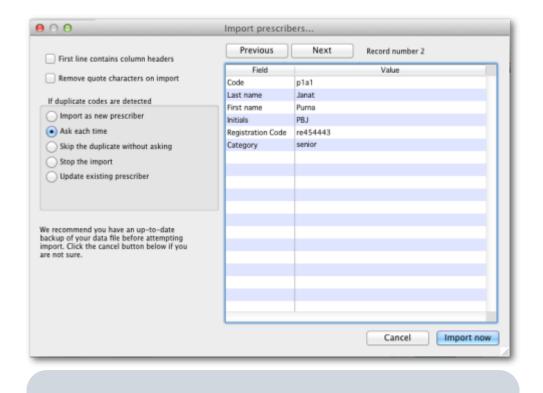

Column	Contents	Unique code for each prescriber
Α	Code	Unique code for each prescriber
В	Last name	The presciber's last name
С	First name	The presciber's first name
D	Initials	The prescriber's initials. These will appear on patient labels
E	Registration code	The prescriber's registration code
F	Category	The category the presciber belongs to

Your tab delimited spreadsheet file would appear something like this:

Choose import options from the preview window and click **OK** to begin import.

If there are non-printable characters before or after the first name, last name or code they will be removed. Any nonprintable characters in the first name, last name or code will be replaced with an underscore (_).
