

## 4.01.01. Items - General tab

[Back to Item Details window](#)

**What are those lock icons?** To minimise the chance of accidental amendment, some critical fields have a lock icon to the left of it. To change any of these fields, you must click on the lock icon first, and then enter the new value in the field.

The screenshot shows the 'Item details' window with the 'General' tab selected. The left sidebar lists various categories like Storage, Misc, Usage, Stock, Ledger, Quotes, Backorders, Notes, Reconcile, Bill of materials, Purchase Orders, Order options, Dispensing, Reporting, Log, Requisitions, Stores, Barcodes, Custom data, Master lists, and Interactions. The main area contains the following fields and sections:

- Item name:** Albendazole 400mg, tabs, chewable
- Item code:** alb400tc
- Store:** General
- General...** section:
  - Units:** Tablet
  - Department:** None (with a lock icon)
  - Category:** (with a lock icon)
  - Category 2:** None (with a lock icon)
  - Category 3:** None (with a lock icon)
  - Interaction group:** None (with a lock icon)
  - Item flag:** (empty)
  - Universal code:** (with a lock icon)
  - Doses:** (empty)
  - Is a vaccine?** ☐
  - Hold: do not issue** ☐
  - Issue in builds only** ☐
  - Allow pack to one conversion** ☐
  - Convert pack to 1 when receiving** ☐
  - Include in DHIS2 data push** ☐
- Pricing** section:
  - Default margin:** 0
  - Default sell price of preferred packsize:** 0.00
  - Price editable when issuing** ☐
- Full description** (text area)
- Product specifications** (text area)
- Stock category** section:
  - Normal stock** ☐
  - Critical stock** ☐
  - On essential drug list** ☐
- VEN Category** section:
  - Not assigned** (selected)
  - Vital** ☐
  - Essential** ☐
  - Not essential** ☐
- Custom fields...** section:
  - user\_field\_1** (empty)
  - user\_field\_2** (empty)
  - user\_field\_3** (empty)
  - user\_field\_5** (0.00)
  - user\_field\_6** (empty)
  - user\_field\_4** ☐
  - user\_field\_7** ☐

At the bottom, there are buttons for 'Delete', 'OK & Previous', 'OK & Next', 'Cancel', and 'OK'.

**Item name:** This is the name by which mSupply will refer to the item.

- You should avoid changing the name of an item to that of another item. If you have accidentally created two copies of the same item, these should be merged - refer [Merging two items](#).
- Historical records will still record the original name, but future invoices and invoices in process will pick up the new name when you add or edit an invoice line.

**Item code:** This is the code assigned to the item. This should be a unique code, and ideally, should not be a part of another code. For example, 1034 is unique, but is a part of 1034a, and so these two codes should ideally not coexist in an mSupply system.

**Store:** The store which you are using is displayed here. For mSupply systems that are only using a single store, this field is not relevant. For users managing more than one store, the desired store may be selected from the drop down menu. For users having access to all stores, and wishing to work with the cumulative data from them all, one of the options displayed will be "Supervisor - All stores" - refer [Miscellaneous topics, Supervisor Mode](#).

---

## General

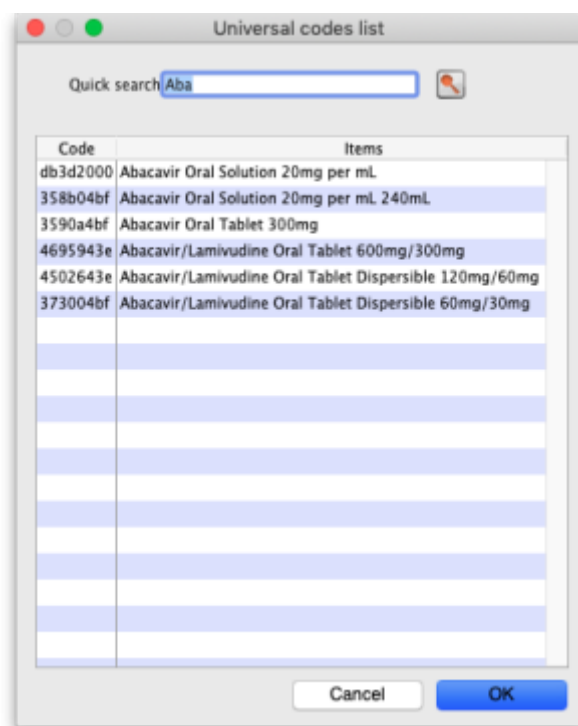

**Units:** Choose the unit you use for this item. It is useful to distinguish items you issue by pack (eg eye drops) from items you issue by volume (eg oral liquids)

**Department:** You can assign each item to a department by choosing from the list of departments here. To set up departments, refer [Managing Item Access...](#)

**Category:** Provided that you have defined item categories, the appropriate category should be selected using the drop down list which displays your defined categories - refer [Item categories](#).

**Interaction group:** Here you can choose the interaction group for the item - refer [Manage drug interaction groups](#).

**Item Flag:** The item flag field is designed for bulk editing, where you use the list view to update many items at once. You can enter or edit an individual item's flag(s) here, though it can be easier to do so using [The list view](#).

When you select a universal code the ATC category, item strength, DDD value and other item properties will also be populated from the universal code server. You can see them on the Reporting tab - see the [4.01.15. Items - Reporting tab](#) page for details.

Make sure you carefully select the correct item from the list when using this feature.

If you want new universal codes added to the system send an email to [support@msupply.org.nz](mailto:support@msupply.org.nz)

You can also search for universal codes manually from a web browser at <https://universalcodes.msupply.org.nz/> (old version) or <https://codes.msupply.foundation> (new version)

**Doses:** Enter the number of doses a single unit of this item provides. Used for vaccines and is only enterable if the **Is a vaccine** checkbox is checked.

**Is a vaccine:** Check this if this item is a vaccine and you want mSupply to include it in the vaccine functionality (see the [mobile vaccine dispensing](#) page for details). When checked, a default value of 1 is entered in the **Doses** field.

**Hold: do not issue:** If this box is checked, the item will not be available to be issued on invoices. It will still appear in lists, but you will get a warning if you choose it when issuing stock, and will be required to choose a different item.

Putting the Item on hold applies to *all* stock lines of the item in the **store you are currently logged into**. If you wish to hold selected stock lines only, you should do that by editing the individual stock lines using [Show items with stock](#) or by using the stock tab of the item's details window (see the [4.01.05. Items - Stock tab](#) page for details).

**Issue in builds only:** Checking this box will mean that the item cannot be issued on customer invoices. This is useful in situations like where an item which by law can not be sold in an unprocessed state, but is used to 'build' (refer [Building \(Manufacturing\) Items](#)) another item which is legal for distribution.

**Allow pack to one conversion:** Checking this box allows stock of the item to be repacked to "1".

**Convert pack to one when receiving:** If this box is checked, when you receive items the pack size will automatically be converted to "1". This is primarily for use in dispensary mode, but may be useful in other situations too.

For example: say you receive 50 x 100 boxes of paracetamol tablets, but you issue variable amounts of paracetamol tablets on invoices. If this option is checked, as you receive the stock on a supplier invoice, it will be converted to 5000 (quantity) x 1 (pack size). You will now be able to issue any quantity you like. The cost and sell price are automatically adjusted for the new pack size.

**Include in DHIS2 data push:** If checked then data from this item will be included in information pushed to DHIS2 via the DHIS2 interface.

---

## Pricing

The screenshot shows a 'Pricing' window with the following fields and values:

Field	Value
Default margin	0
Default sell price of preferred packsize	0.00
Price editable when issuing	<input type="checkbox"/>

**Default margin:** This is the margin that will be applied to this item on supplier invoices to calculate the selling price. Note that if a supplier margin is also set, there is a setting in the **Preferences > Invoices 1** that determines which margin will be used. Note also that if a default selling price is set, this price will take priority and be used rather than the margin.

**Default sell price of preferred pack size:** Only enter a price here if you want a fixed selling price for this item. Enter the price for one unit (eg 1 capsule or 1 gm). A price entered here will override

any margins you have specified for either the supplier or the item.

**Price editable when issuing:** If the **Allow editing selling price on customer invoice lines** store preference is turned on (see [Virtual store preferences](#)) and this checkbox is checked, when adding a line of this item to a customer invoice, an additional **Sell price** field will be available for the user to enter the sell price for that line of the customer invoice (see [Issuing goods \(customer invoices\)](#) for details).

---

## Full description

This field may be used for entering a fuller description of the item should the item name alone be insufficient.

---

## VEN category

Like all categorisations, this one is used for reporting. VEN category options available are:

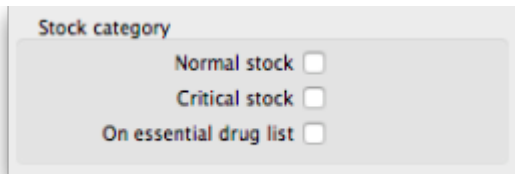

- *Not assigned*
- *Vital*
- *Essential*
- *Not essential*

You can select one of the options only and *Not assigned* will be selected for all items by default.

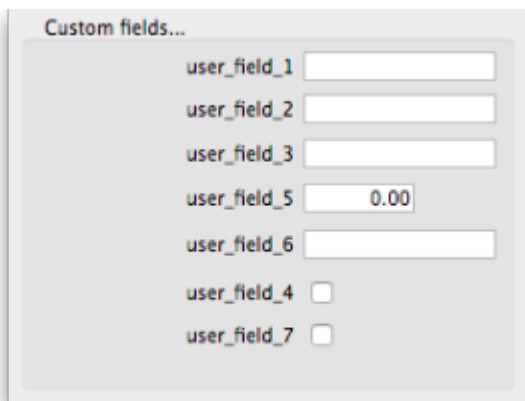

Authorities, including the WHO, are inconsistent on whether **N** should stand for **Necessary** or **Not essential**. It makes no difference to mSupply, but if you want this changed in your installation of mSupply, talk to Sustainable Solutions

## Stock category

A screenshot of a dialog box titled "Stock category". It contains three checkboxes: "Normal stock", "Critical stock", and "On essential drug list". All three checkboxes are currently unchecked.

These categorisations are used for reporting and you can check as many as are appropriate. You don't have to check any, they are entirely optional.

## Custom fields

A screenshot of a dialog box titled "Custom fields...". It contains seven fields: "user\_field\_1", "user\_field\_2", "user\_field\_3", "user\_field\_5", "user\_field\_6", "user\_field\_4", and "user\_field\_7". Fields 1, 2, 3, and 6 are text input fields. Field 5 is a numerical input field with the value "0.00". Fields 4 and 7 are boolean checkboxes, both of which are unchecked.

These are 7 fields available for users to store information appropriate to their operation. These fields may be queried when performing a search or producing a custom report. Their default names are **user\_field\_1**, **user\_field\_2**, etc., but these labels may easily be edited to more descriptive ones as required..

Field types:

- Fields 1,2,3 & 6 are text fields
- Field 5 is a numerical field
- Fields 4 & 7 are boolean - True/False (Yes /No) entry.

To set the names of the user fields, refer [General Preferences, Miscellaneous tab](#).
