

22.16. Authorisation

Sometimes it is important that goods are not distributed to customers or received into stock until such an action has been **authorised**.

mSupply has invoice authorisation functionality to make this possible and allows, for example, a manager to control the processing of invoices.

Authorisation can be set according to local needs for:

- Customer Invoices
- Supplier Invoices
- Request Requisitions
- Response Requisitions
- Purchase Orders

Invoices can be edited after authorisation but **goods receipt lines cannot be unauthorised** to fix mistakes! Any authorised errors can only be fixed using stock adjustments.

When invoices have to be authorised, they **cannot be confirmed until they are authorised**. Until then:

- Unauthorised invoices are held at suggested (sg) status
- The official invoice cannot be printed
- Goods are not removed from or received into stock

Configuring mSupply for authorisation

Turning on authorisation

Authorisation must be set up for **each store independently**. For each store, you can decide which transaction types require authorisation.

1. Click the **Special** tab, then click **Stores**.
2. Double click the store to edit.
3. Click the **Preferences** tab.
4. Check the boxes to set compulsory authorisation for specific transaction types at that store.

5. Click **OK**.

Edit store

General Preferences Logo Synchronization

☐ Sort available batches by VVM Status rather than Expiry

☐ Patients created in this store not visible in other store

☐ Names created in this store not visible in other stores

☐ Items created in this store not visible in other stores

☐ Allow users to enter total quantities to distribute

☐ Round up the distributed quantity

☐ Able to pack items into multiple boxes

☐ Store : Able to issue in foreign currency

☐ Allow editing selling price on customer invoice lines

☒ Purchase order must be authorised

☐ Finalize customer invoices automatically

☒ Customer invoices must be authorised

☐ Authorisation needed only if over budget

☐ Confirm customer invoices automatically

☒ Supplier invoices must be authorised

☐ Confirm Supplier Invoices without asking

☒ Goods received lines must be authorised.

☐ Locations must be entered for goods received.

☐ Able to specify manufacturer when receiving, ordering or quoting for items

☐ Show item unit column while issuing

When finalising a Goods Receipt

☒ Don't receive goods into stock until Supplier Invoice is taken off hold

☐ Receive goods into stock, and leave Supplier Invoice confirmed

☐ Receive goods into stock, and finalise Supplier Invoice immediately

For stock transfers, the Supplier Invoice in the receiving store should be:

☒ Finalised ☐ On hold

Cancel OK

From now on, the transaction types you set the preferences for must be authorised before being confirmed.

Setting up authorisers

To use the authorisation module, certain users must be designated as **Authorisers** for each store and transaction type requiring authorisation.

Give the user permission to be an authoriser:

1. Click the **Admin** tab, then click **Edit Users**. Double click on the user to edit.
2. Go to the **Permissions** tab and the **Permissions (2)** tab and check the boxes that give the user permission to authorise specific transaction types.

All on Copy Paste Delete Cancel OK

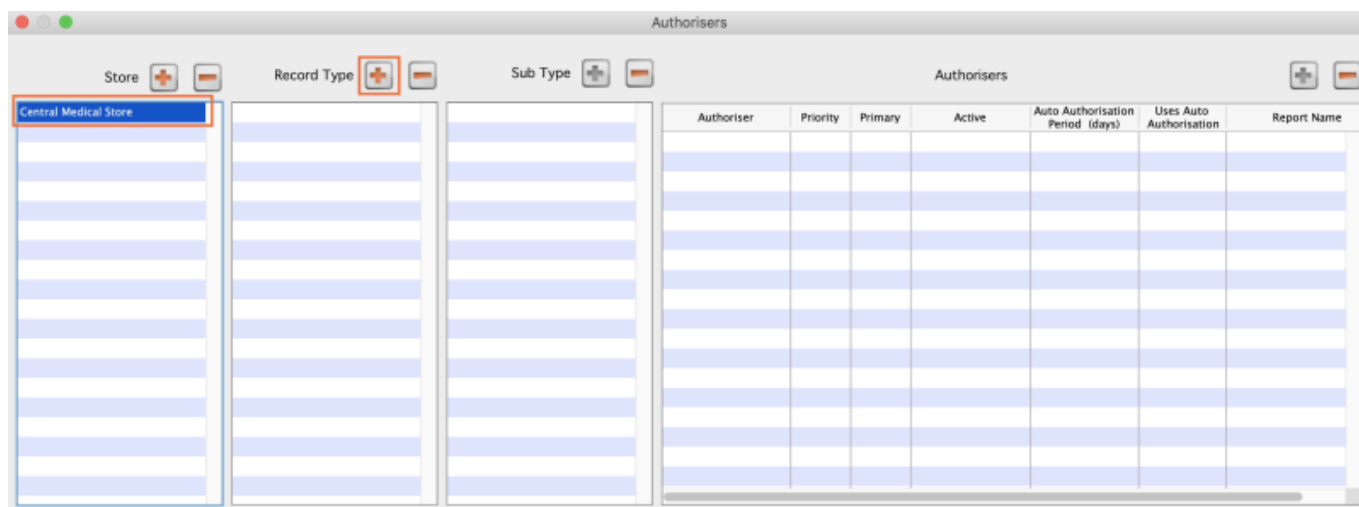

3. Click **OK** until you return to the navigator home page.

4. Click on **Special > Show Authorisers**.

[illegible]

6. Choose the store to allocate authorisers to and click **OK**.

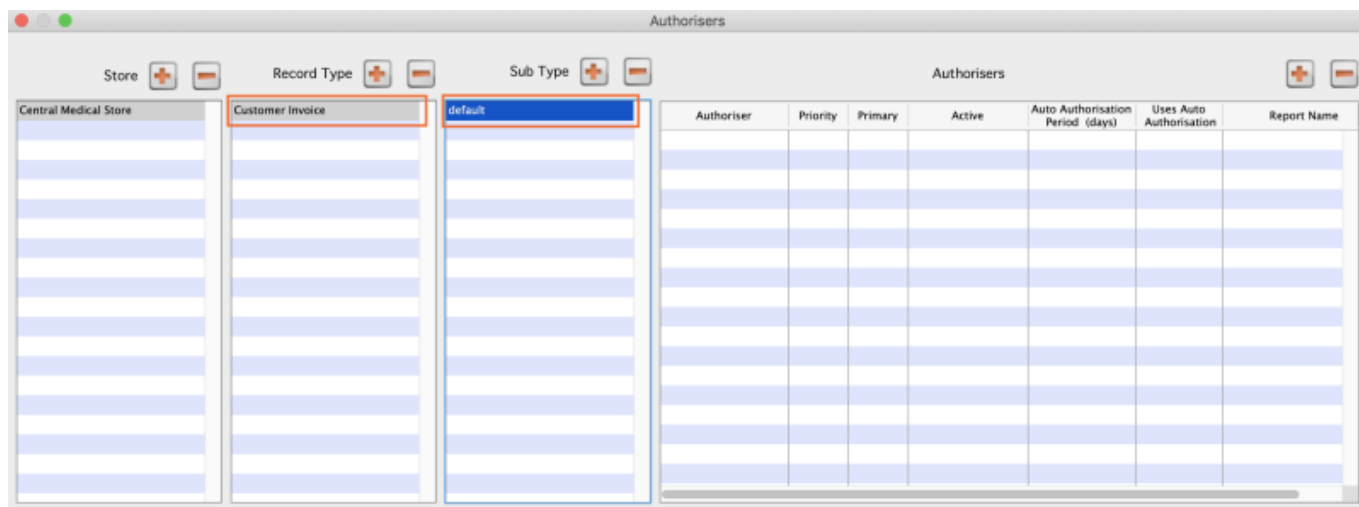

7. Select the store from the list, then click the **Plus** button in the **Record Type** column.

The screenshot shows the 'Authorisers' window with three columns: 'Store', 'Record Type', and 'Sub Type'. The 'Store' column has a list with 'Central Medical Store' selected. The 'Record Type' column has a plus button highlighted. The 'Sub Type' column has a plus button. The 'Authorisers' table on the right is empty with columns: Authoriser, Priority, Primary, Active, Auto Authorisation Period (days), Uses Auto Authorisation, and Report Name.

8. Choose the type of transaction to allocate authorisers. Select from Customer Invoices, Supplier Invoices, Request Requisitions or Response Requisitions and click **OK**.

9. Select the record type from the list, then click **Default** to allow authorisation for all sub types. Alternatively, click the **Plus** button in the **Sub Type** column to create further specifications (e.g. if certain users can authorise customer invoices for some facilities only).

The screenshot shows the 'Authorisers' window with three columns: 'Store', 'Record Type', and 'Sub Type'. The 'Store' column has 'Central Medical Store' selected. The 'Record Type' column has 'Customer Invoice' selected. The 'Sub Type' column has 'Default' selected. The 'Authorisers' table on the right is empty with columns: Authoriser, Priority, Primary, Active, Auto Authorisation Period (days), Uses Auto Authorisation, and Report Name.

10. In the **Authorisers** section, click the **Plus** button to add authorisers for that specific transaction type (and sub type) in that specific store. You will only be able to allocate users that have permission to be authorisers (steps 1 - 3).

Supplier invoice authorisation

With the *Supplier invoices must be authorised* store preference set, your newly created supplier invoices will look like this:

Notice the **Authorised** checkbox at the bottom left of the window. If you click the OK button with this checkbox unchecked, you will get a warning message telling you that unconfirmed invoices cannot be confirmed and nothing will happen. If you have the permission set to allow you to authorise invoices (see [here](#) for details) then you can click on the *Authorise* checkbox and continue. However, if you do not have the permission set, the *Authorised* checkbox will be disabled and you cannot authorise the invoice. Another user who has the permission must check the box for you before you

can proceed.

Unauthorising supplier invoices and inventory additions

If you have permission to authorise an invoice, you can also unauthorise it. If the invoice has status “NW” then it has not been entered into stock, and you can allow users to edit it and you will still control the process of authorisation before the goods are put into stock. *However*, if the invoice is already confirmed, the goods have already been entered into stock, and any changes users make will affect stock levels immediately, even though the invoice is not authorised. Therefore, only unauthorise a confirmed invoice to make immediate changes yourself, then immediately reauthorise it.

Alternatively, if goods have not been issued, you can delete the lines off the invoice (and optionally then delete the whole invoice) and require users to enter a new invoice to receive the stock, and the normal authorisation process will apply to the new invoice.

Customer invoice authorisation

With the *Customer invoices must be authorised* store preference set, newly created customer invoices will look like this:

Customer invoice

Name: Acumao/Remexio CHC Confirm date: 23/05/2013 Colour: Black

Their ref: AIL-403-2 Invoice: 9,252

Comment: Category: None Entry date: 23/05/2013

Goods receive ID: 0

Status: cn

Entered by: Sussol

Store: General

New line Delete line(s) Backorders History

General Summary by Item Summary by Batch Transport details Log

...	L...	Location	Item Name	Quan	Pack Size	Batch	Exp date	Sell Price	Price exten
1			Acces Pin With Stopper for use IV.Inj. site	2	1			0.61148	1.22296

Other charges Item: Amount: 0.00000

Subtotal: 1.22296

0 % tax: 0.00000

Total: 1.22000

Hold Finalize Authorised Export batch: 0

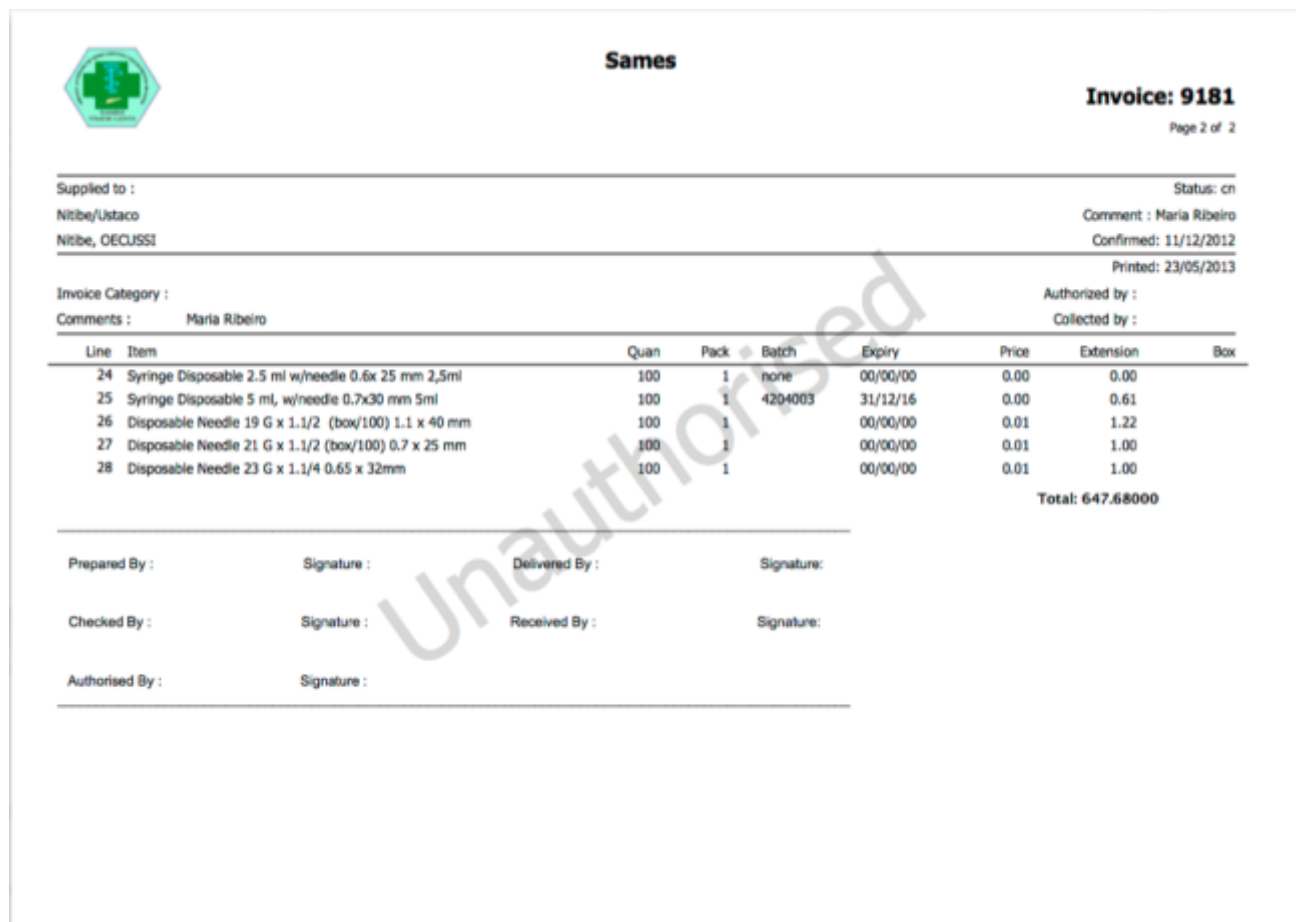

OK & Next Delete OK

Again, notice the *Authorised* checkbox at the bottom left of the window. This behaves exactly the same as the *Authorised* checkbox on the bottom left of a supplier invoice: the customer invoice cannot be confirmed until this checkbox is saved as checked. And, once again, if you do not have the

Can *authorise invoices* permission set, it will be disabled and you will be unable to authorise the invoice; someone else, with the permission set, must do it for you.

Printing invoices which must be authorised

When an invoice is not authorised an attempt to print it will produce an invoice with an 'Unauthorised' watermark, just like this:

Sames

Invoice: 9181
Page 2 of 2

Supplied to : Nitibe/Ustaco
Nitibe, OECUSI

Status: cn
Comment : Maria Ribeiro
Confirmed: 11/12/2012
Printed: 23/05/2013

Total:						647.68000		

Prepared By : Signature : Delivered By : Signature:

Checked By : Signature : Received By : Signature:

Authorised By : Signature :

As soon as the invoice is authorised it will print normally without the unauthorised watermark.

Purchase order authorisation

Purchase Orders can also be authorised - refer to [Authorising Purchase Orders](#).

View authorisation logs

mSupply records the authorisation and unauthorisation of invoices and creates a log record every time the authorisation status of an invoice changes. To view the log records click on the log tab of an invoice, as shown in the screenshot below.

[illegible]

You can also view all logs from **Special > View log...**. See [here](#) for details.
