# **22.16.** Authorisation

Sometimes it is important that goods are not distributed to customers or received into stock until such an action has been **authorised**.

mSupply has invoice authorisation functionality to make this possible and allows, for example, a manager to control the processing of invoices.

Authorisation can be set according to local needs for:

- Customer Invoices
- Supplier Invoices
- Request Requisitions
- Response Requisitions
- Purchase Orders

Authorisation can either occur within mSupply or externally using the mSupply web authorisation system (see **Remote authorisation**).

Invoices can be edited after authorisation but **goods receipt lines cannot be unauthorised** to fix mistakes! Any authorised errors can only be fixed using stock adjustments.

When invoices have to be authorised, they cannot be confirmed until they are authorised. Until then:

- Unauthorised invoices are held at suggested (sg) status
- The official invoice cannot be printed
- Goods are not removed from or received into stock

# Configuring mSupply for authorisation

## **Turning on authorisation**

Authorisation must be set up for **each store independently**. For each store, you can decide which transaction types require authorisation.

- 1. Click the  $\ensuremath{\textbf{Special}}$  tab, then click  $\ensuremath{\textbf{Stores}}.$
- 2. Double click the store to edit.

#### 3. Click the **Preferences** tab.

4. Check the boxes to set compulsory authorisation for specific transaction types at that store.

#### 5. Click **OK**.

| Gyogone Central PMCT NAP<br>General Preferences Logo Synchronization   |                                 | × |
|--|---------------------------------|---|
| <ul> <li>Sort available batches by VVII Status rather than E</li> <li>Patients created in this store not visible in other store</li> <li>Names created in this store not visible in other store</li> <li>Items created in this store not visible in other stores</li> <li>Allow users to enter total quantities to distribute</li> <li>Round up the distributed quantity</li> <li>Able to pack items into multiple boxes</li> <li>Store : Able to issue in foreign currency</li> <li>Allow editing selling price on customer invoice lines</li> <li>Purchase order must be authorised</li> <li>Finalize customer invoices automatically</li> <li>Customer invoices must be authorised</li> <li>Authorisation needed only if over budget</li> <li>Confirm Customer invoices without asking</li> <li>Goods received lines must be authorised.</li> <li>Locations must be entered for goods received.</li> <li>Able to specify manufacturer when receiving, order</li> <li>Show item unit column while issuing</li> </ul> | When finalising a Goods Receipt |   |
|  | Cancel OK                       | ] |

From now on, the transaction types you set the preferences for must be authorised before being confirmed.

### Setting up authorisers

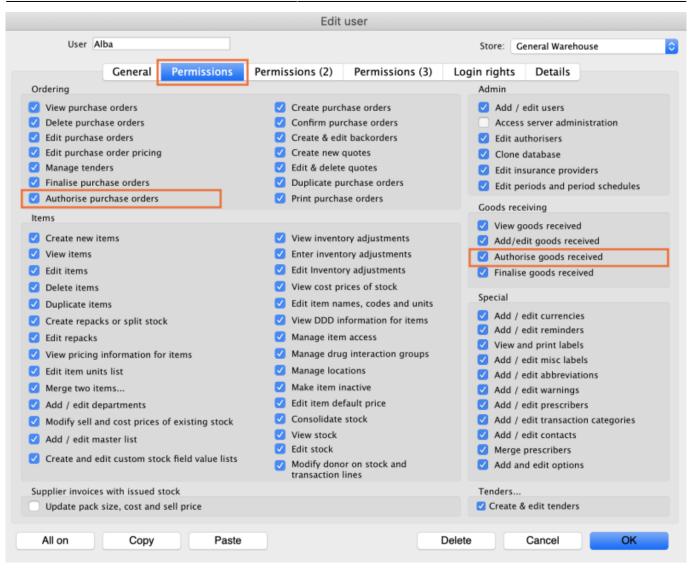

To use the authorisation module, certain users must be designated as **Authorisers** for each store and transaction type requiring authorisation.

#### Give the user permission to be an authoriser:

1. Click the **Admin** tab, then click **Edit Users**. Double click on the user to edit.

2. Go to the **Permissions** tab and the **Permissions (2)** tab and check the boxes that give the user permission to authorise specific transaction types.

|                       |                  |         |            |          |         |             |                                     |                            |             |

10. In the **Authorisers** section, click the **Plus** button to add authorisers for that specific transaction type (and sub type) in that specific store. You will only be able to allocate users that have permission to be authorisers (steps 1 - 3).

| 0                     |                  |              | Auth | orisers    |          |         |             |                                     |                            |             |

# Supplier invoice authorisation

17:55

When the Supplier invoices must be authorised store preference is set, new supplier invoices will contain an Authorised checkbox.

An authoriser must check the **Authorised** box before the supplier invoice can be finalised.

- The **Authorised** box will be disabled for users without permission to authorise.
- If the **OK** button is clicked while the **Authorised** box is unchecked, a warning message will appear stating that unconfirmed invoices cannot be confirmed and nothing will happen.

### Unauthorising supplier invoices and inventory additions

If you have permission to authorise an invoice, you can also unauthorise it. If the invoice has status "NW" then it has not been entered into stock, and you can allow users to edit it and you will still control the process of authorisation before the goods are put into stock. *However*, if the invoice is already confirmed, the goods have already been entered into stock, and any changes users make will affect stock levels immediately, even though the invoice is not authorised. Therefore, only unauthorise a confirmed invoice to make immediate changes yourself, then immediately reauthorise it.

Alternatively, if goods have not been issued, you can delete the lines off the invoice (and optionally then delete the whole invoice) and require users to enter a new invoice to receive the stock, and the normal authorisation process will apply to the new invoice.

# **Customer invoice authorisation**

With the *Customer invoices must be authorised* store preference set, newly created customer invoices will look like this:

| Name Acu<br>Their ref      | mao/Remexio CHC AlL-403-2                   |                        |                            |             |         | Invoice : 9   | ,252            |
|----------------------------|---|------------------------|----------------------------|-------------|---------|---|-----------------|
| Comment<br>•••<br>New line | Delete line(s)                              | Backo<br>ary by Item S | None<br>Mistory<br>Batch T | ransport de | ¢       | Entry date : 2<br>Goods receive ID : 0<br>Status : c<br>Entered by : S<br>Store : C | )<br>n<br>ussol |

|                            | Acces Pin With Stopper for use IV.Inj. site | 2                      | <br>BACCI                  |             | 0.61148 | PIRC EALEN  | 1.22296         |
| F i 🛛 .                    | Dther d                                     | harges Item:           |                            |             |         | Amount:<br>Subtotal:  | 0.0000          |
|                            |   |                        |                            |             |         | 0 % tax:<br>Total:  | 0.0000          |

Again, notice the *Authorised* checkbox at the bottom left of the window. This behaves exactly the same as the *Authorised* checkbox on the bottom left of a supplier invoice: the customer invoice cannot be confirmed until this checkbox is saved as checked. And, once again, if you do not have the *Can authorise invoices* permission set, it will be disabled and you will be unable to authorise the invoice; someone else, with the permission set, must do it for you.

### Printing invoices which must be authorised

When an invoice is not authorised an attempt to print it will produce an invoice with an 'Unauthorised' watermark, just like this:

|             |         |                   |   |               | 5              | ames       |        |                 |                   |       | Invoice        | 0101        |

As soon as the invoice is authorised it will print normally without the unauthorised watermark.

## **Purchase order authorisation**

Purchase Orders can also be authorised - refer to Authorising Purchase Orders.

### View authorisation logs

mSupply records the authorisation and unauthorisation of invoices and creates a log record every time the authorisation status of an invoice changes. To view the log records click on the log tab of an invoice, as shown in the screenshot below.
