Transaction categories

Categorizing transactions allows you to group transactions together when reviewing or reporting them. Each type of transaction can have its own list of categories. For example customer invoices might have a category “normal” and “urgent”. Inventory adjustements might have categories “expired”, “damaged” and “stocktake”

From the *Special* menu, choose *Categories*

Click on “New” button to create a new category.

The categories can be added to customer, customer credit, supplier, supplier credit, repack, build, inventory adjustment while creating or editing transactions.

Once you have assigned categories they will show as a drop-down list when you enter a new invoice or transaction.

(In versions of mSupply prior to v1.8 categories were set in the Preferences, and there were only categories for supplier and customer invoices), and they can be reported on, refer How to report by

invoice category.
