Updated: Version 4.02

NeedsUpdate

6.04. Ordering from one store to another

If you run mSupply using virtual stores then you can place an order for goods with another store within mSupply.

There are two ways you can do this:

- Create Purchase Orders.
- In versions of mSupply newer than v4.01, Internal Orders are the desktop equivalent of supplier requisitions in mSupply mobile. If you're already using purchase orders and goods received records in your workflow, this is a simpler and easier way to place orders in another store:
 - 1. create internal order to supplying store in requesting store
 - 2. when the internal order is finalised, a response requisition is automatically created in the supplying store
 - 3. in the supplying store, multiple customer invoices can be created from a single response requisition
 - 4. when each customer invoice is finalised, a supplier invoice is automatically created in the requesting store

Internal Orders

Internal Orders are also known as request requisitions.

Entering an internal order

To begin the process, choose *Supplier* > *Show internal orders* or click on the *Internal orders* icon on the *Suppliers* tab of the Navigator. The following window will open, showing you a list of all historic internal orders:

New internal Delete order				Show	Suggested Suggested Confirmed Finalised	
ID Name	Date entered	Order date	Status		Completed Entered today	
3852 Central Medical Stores	18/10/2018	18/10/2018	sg	regular order	All	

Click on the Show drop down list to filter the list.

Either double-click on an existing order to edit it, or click the **New internal order** button to create a new one.

If you have activate programs in mSupply see the *Programs* heading below

The example below has a few lines already entered:

3/10

Order date	Central Medical Stores 18/10/18 dd from master list Delete line(s)	CMS Fifter iten		Referen Comme Max MC hreshold MC	nt regular DS B DS 0		ick over thre	sheld 🗌	Black	Status : Type : Entry date : Entered by :	request 18/10/18

											~
0											3
e Sort order								☐ finalise	Cancel C	K & Next	OK

- The *Name* will default to the supplying store for the current store, but any other store in the data file can be selected in the usual way (i.e. enter the first key characters and hit the *Tab* key to find matches).
- The Order date defaults to the current date. You can change it.
- Use either the **New line** button to manually add a single item, or **Add from master list** to add any items in the current store's master list which are not there already.
 - If adding from a master list, the cursor will go into the first new item's *User requested quantity* cell.
 - If adding a single item, the cursor will go into the *User requested quantity* cell for that item.
 - For each item,
 - mSupply already knows Our stock on hand
 - mSupply calculates the Average monthly consumption based on what the store has issued over the last 12 months (or less if the store hasn't been operating that long).
 - mSupply calculates the *Months of stock* from *Our current stock on hand* and the *Average monthly consumption*, assuming that continues.
 - The *Calculated quantity* is then worked out by multiplying the *Average monthly consumption* by the *Max MOS* (maximum months of stock), and then subtracting *Our stock on hand*. If the resulting value is negative, a value of will be displayed.
 - The Max MOS is critical to this calculation, and you can change it.
 - There is an industry rule of thumb that the Max MOS should be set to 3 times the ordering cycle.
 - The default *Max MOS* is 3.0, which is based on an a monthly ordering cycle.

• If, for example the ordering cycle was every two months, then *Max MOS* should be set to $3 \times 2 = 6.0$.

- Hitting the *Tab* key will move the cursor into the *Comment* cell and, if there's another line below, hitting *Tab* again will move the cursor into the next *User requested quantity* cell.
- If necessary, use the **Delete line(s)** button to remove selected item lines.

Order date [18	/10/18				nt regulat	r order				Status: sg
	from master list Delete line(s)	Filter iten	-	Max MK hreshold MK	os 🛛	Hide sto	ock over thre	shald 🗹	Pont	Type : request Entry date : 18/10/18 Entered by : Admin Store: OD Test Stor
Data entry Log	ltem nome	Unit	Our stock on hand	Average monthly consump	Months of stock	Calculated quantity	User requested quantity		Comment	
1 NCD071 A	moxycillin 250mg tabs	ea	43,962	17,651	2	26,645	26,645			
	aracetamol 500mg tabs	40	27,328	9,389	2

									5
e Sort order									

Note that, while a filter is active, some of the other buttons are disabled e.g. you can't save the sort order unless all lines are visible.

You can also filter item lines which have a lot of stock (and therefore don't need to be ordered) by entering a value in the *Threshold MOS* field. This will automatically tick the *Hide stock over threshold* checkbox, and hide any lines which have their *Months of stock* greater than or equal to *Threshold MOS*.

Name Order date	Central Medical Stores	CMS		Referen	ce (ref nt (regular	order	1		llack	00 : 13852 Status : sg

									3
e Sort order								Cancel Cancel	OE & Next OE

When the order is then saved, it will automatically generate a corresponding response requisition in the supplying store. From there, one or more customer invoices can be raised in the supplying store which, when finalised, appear as supplier invoices back in the requesting store in the same way as regular stock transfers.

Programs

Activating programs turns on a complex system of managing orders and supplies by program Here is an example configured for Côte d'Ivoire:

• • •	New internal order
Order type	
Pro	ogram 💿 General 🔿
Order details	
Program	CONSOMMABLES DE SERVI
Requisition type	Commande Urgente ou Exc
Supplier	NPSP AGENCE D'ABIDJAN
Period	17 SEPT /23 OCT. 2019
	Start date 17/9/19
	End date 23/10/19
	Cancel

Normal or Emergency Orders: When creating an order type for a program, you can indicate that the order type is for a normal or an emergency order. If you choose *normal order* the ordering rules will be applied, and the order will be calculated for you. You will usually only be able to place one normal order per period.

If you choose *emergency order* this will assign a maximum number of lines amount to the order type as specified when you set up emergency orders for the program.

Purchase orders

This method is deprecated: We suggest you use Internal Orders (above)

Using a purchase order to order from another store

For the most part, the process is the same as for creating a normal purchase order. There are, however, a few significant differences:

• In the *Name* field of the purchase order, enter the name of the store which will supply your goods.

The names of suppliers which are stores will appear in *RED* in the choice list of suppliers. If the name of the store you select as a supplier is *BLACK*, then you have not chosen another store as a supplier, and the instructions in the remainder of this section do not apply.

• The *Internal requisition* label will appear after the name to indicate that this is going to be an internal requisition.

Once confirmed, it will no longer be possible to modify the purchase order lines, except for updating the expected data of delivery (EDD).

Processing the order (supplying store)

For versions of mSupply newer than v4.01, confirming the purchase order will create a response requisition in the supplying store (with your store's name in the *Name* field). This allows the supplying store to create multiple customer invoices to supply the order (and hence to better handle partially fulfilled orders). For older versions of mSupply, it will create only a single customer invoice.

Once each customer invoice has been **finalised**, a goods received note for the purchase order will be created back in the store where you created the purchase order which started this whole process off (called the customer or receiving store).

Handling partially fulfilled orders

If you have unfilled lines on the customer invoice (i.e. red placeholder lines), when you finalise the customer invoice you will be asked if you want to create a new invoice with the unfilled lines. This new invoice retains the link to the purchase order that created the original customer invoice, and can be used to issue further goods to the customer.

Note that you can also create another invoice that is linked to the original purchase order at any time by using the "Duplicate" button on the toolbar of the customer invoice list.

Receiving the goods (requesting store)

Now, back in your store, where you created the purchase order which started this whole process off, you can view the goods received record via the **Suppliers** tab on the Navigator or via the **File > Supplier > Show goods received** menu item (or via the **File > Supplier > Show purchase** orders > Goods received tab)

Notice that on the goods received note the lines from the customer invoice will have been filled in automatically. Process the goods received note in the normal way and note that, as with all other goods received, the goods are not added to your store's stock and available for issue until the goods received note has been finalised and the resulting supplier invoice confirmed. Note that, from mSupply v3.85, the original purchase order lines will only be updated with the stock received when the goods received note has been finalised.
