12.02. Ordering Process with Supplier Hub

The complete ordering process for the supplier hub is summarised in the diagram below:

- 1. The customer creates a purchase order in their mSupply instance (top left in the diagram) which, when confirmed, is sent to the Supplier Hub.
- 2. The Supplier hub sends this as a customer requisition to the supplier's mSupply instance.
- 3. The supplier creates a customer invoice from the customer requisition; this determines the stock that is sent to the customer.
- 4. Once finalised, the customer invoice is sent to the Supplier hub as an Advance Shipping Notification (ASN).
- 5. The customer receives this as a Goods Received note in their mSupply instance.
- 6. The Goods Received note can be edited to correctly reflect the stock received in the customer's store.
- 7. Once finalised, the Goods Received note information is updated on the customer's original purchase order and sent to the Supplier Hub. It then updates the customer invoice originally created in the supplier's mSupply instance to show the quantity, batches and date or reception of the stock received.

Ordering from a Supplier Hub site

You order from a supplier hub site by sending them a calculated purchase order. You cannot create a purchase order manually for a Supplier Hub supplier. For full details about creating calculated purchase orders, please see the 6.01. Ordering stock from suppliers page.

Creating a calculated order for a Supplier Hub supplier has a small difference from the process described on the page given above. After clicking on the *Calculated* icon on the *Suppliers* tab of the Navigator, select the *Order from a hub supplier* option in the top drop down list:

This will make a **Supplier** text field appear:

| New order | |
|---|--|
| Order from a hub supplier Supplier This will calculate an order for all items on the supplier's local list. | |
| Other info | |
| Months stock required | 4 Calculate |
| Use the last | months usage to calculate average usage |
| Comment | |
| Requested delivery date 12/03 | 3/20 |
| ✓ Ex | cclude transfers from usage calculations |
| | clude usage for build ingredients |
| _ In | clude items with suggested zero order quantity |
| ✓ Ex | clude items which expire within 0 months |
| Builds | |
| Include planned builds | |
| Make sure planned builds w | ill be covered 1 times |
| | Cancel Create Order |

Type the first few characters of the supplier's name or code in the field and press the *Tab* key on the keyboard to select the correct one from a list of those which start with what you typed (if there is only one, it will be selected and entered for you).

When you click the **OK** button, the order will be calculated for all the items in the supplier's catalogue (i.e. master list - see the *Setting up Catalogues* section on the 12.01. Configuring the Supplier Hub page.

When you confirm the order it will be sent through the Supplier Hub to the supplier's mSupply instance as a customer requisition.

Once created, you cannot change the supplier on a Supplier Hub purchase order.

If you create a purchase order for a non-Supplier Hub supplier then you cannot change it to be a Supplier Hub supplier.
