

## 19.06. Mobile Dashboard set up (after v4.0)

August 2020:

- The instructions on this page are for configuring both:
  - [mSupply's legacy web dashboard](#). This is now superseded by the [mSupply Grafana web dashboard](#)
  - [mSupply Mobile dashboards](#). The instruction on this page are still the only way to configure them for mSupply versions 4.0 and later

The following instruction are for setting up dashboards for mSupply versions 4.0 and later. For mSupply versions earlier than v4.0, the dashboard setup is accessed and configured via the mSupply Preferences menu, refer to [Dashboard set up \(prior to mSupply v4.0\)](#).

### **Before you set the dashboard up you must:**

- know what ports are already in use on the server
- have an appropriate [SSL Certificate](#) set up.
- make sure your [webserver](#) is currently running.

Sustainable Solutions can help with these.

## Configure the dashboards

1. On the **Admin** tab of the Navigator click on the **Dashboard** button:

dashboard reports is automatically started, there is no separate setting for turning it on and off. Similarly, if no reports are selected the dashboard report generating process will be turned off automatically.

- Set the number of minutes in the **Update Period (mins)** column to set how often each of these reports is generated. 1440 is one full day.

The *Dashboard Tab* tab is for setting up Dashboard tabs (see the [Dashboard tabs](#) section below) and the Export settings tab is for telling mSupply when and how to update the data behind the dashboard (see the [Exporting mSupply data to the dashboard](#) tab section below).

## Available dashboard reports

There are several built-in dashboard reports that everyone can use. The table below documents what they show and what properties can be edited:

If you would like help with adding one of these reports to your list, contact Sustainable Solutions on [support@msupply.org.nz](mailto:support@msupply.org.nz)

Report	Method	Format	Parameters	
<b>Expiring items for Store</b> Shows a list of items, for a given store, which will expire within a specified number of months. v4.01	<i>dashboardReportExpiringItemList</i>	Table, Bar chart	monthsToInclude	The number of months before expiry that the report includes (defaults to 3 if this parameter is missing)
			storeCode	search for a single store matching this code
			dataElement	Looks for the dataElement in the aggregator table. If blank, will default to AMC
			customisation	allows for a client customisation: currently supports MAM.
			ven_category	V, E, N or E, N or V, E ..etc will filter for the respective VEN values. If blank, no filtering by VEN value
			chartType	bar, table. If blank, will default to table
Report	Method	Format	Parameters	
<b>Expiring Stock</b> Shows a graph of total value of stock expiring grouped by the number of months in which the stock will expire.	<i>dashboard_rep_expiring_stock</i>	Bar chart	None	

Report	Method	Format	Parameters	
<b>Items issued this month</b> Shows a list of items, per store, which were issued in the last 30 days. Uses store tag and master list to select items to be displayed.	dashboard_itemRow_storeCol_usag	Table	store_tag	Identifies stores to display. Multiple stores can be selected by separating them by comma or space e.g. "bacau,CHC" or "bacau CHC"
			master_list	Show items which are included in this master list
			period	Number of days from the current date to look back

Report	Method	Format	Parameters	
<b>Map stock on hand</b> Shows a map of the area specified, with an "X" if the facility is out of stock of the item, or a dot representing the amount of stock on hand.	dashboard_map_stock_on_hand	Map	country	Name of country - compulsory but not shown
			item_code	the code of the item to display
			lat_nw_corner	the latitude of the North-West corner of the map
			long_nw_corner	the longitude of the North-West corner of the map
			lat_se_corner	the latitude of the South-East corner of the map
			long_se_corner	the longitude of the South-East corner of the map
			store_tags	A comma separated list of tags - or omit this parameter if you want to show stock for all stores

Report	Method	Format	Parameters	
<b>Monthly transactions</b> Shows a bar chart of the number of purchase orders, goods receipts, supplier and customer invoices created this month.	dashboard_rep_month_transacs	Bar or Line chart	None	

Report	Method	Format	Parameters	
<b>Stock_for_category1_stores_by_item_list</b> Shows a table of items in rows and stores in columns, with the stock on hand for that item in that store in each cell.	<i>dashboard_rep_stk_StoreCols_Itm</i>	Table	store_code	code or codes of stores to show. to specify multiple stores enter multiple store_code params (append @ for a "starts with" search)
			master_list	VHP - All Items Will search for items that are part of the master list : "VHP - All Items"
			item_code	items whose code matches this code (append @ for a "starts with" search)
			Category1_description	private Will search for names whose name category 1 is "private"

Report	Method	Format	Parameters	
<b>Store Transaction Count</b> Shows a count of each store's transactions for the past 7 and 30 days	<i>dashboard_rep_count_store_trans</i>	Line or Bar chart	store_tags	matches stores with this tag

Report	Method	Format	Parameters	
<b>Sync sites last connection date</b>	<i>dashboard_report_last_sync_date</i>	Table	None	

Report	Method	Format	Parameters	
<b>Sync sites sent and received statistics</b>	<i>dashboard_report_sync_stat</i>	Table	None	

Report	Method	Format	Parameters	
<b>Sync sites statistics</b> Shows a range of statistics related to synchronisation v4.02+	dashboardSyncSiteStatistics	table	storeTag	(default = %) - report will select stores where tags match %{{storeTag}} and sync_id_remote_site > 1
			syncDayThreshold	(default = 5) - color cell red when days since last sync > syncDayThreshold
			unfinalisedSIThreshold	(default = 0) - color cell red when number of unfinalised supplier invoices > unfinalisedSIThreshold
			stocktakeDayThreshold	(default = 30) - color cell red when days since last stocktake > stocktakeDayThreshold
			requisitionDayThreshold	(default = 30) - color cell red when days since last requisition > requisitionDayThreshold
			lookBackPeriod	(default = 50) - Look back number of days for Supplier Invoice, Stocktake and Requisitions
			lookBackPeriodCI	(default = 30) - Look back number of days for Customer Invoice
			daysWithCIThreshold	(default = 0.2) - color cell red where 'days with customer invoice' divided by `number of working days` < daysWithCIThreshold

Report	Method	Format	Parameters	
<b>This month's transactions</b> Shows a bar chart of the number of purchase orders, goods receipts, supplier and customer invoices created this month.	dashboard_rep_month_transacs	Bar chart	store_name	If provided the report shows details for the given store, otherwise the default store is used
Report	Method	Format	Parameters	
<b>Top facilities supplied</b> The 10 customers in your store to which you have sent the greatest value of stock. Shows the value of stock for each customer.	dashboard_rep_top_facilities	Bar chart	None	

Report	Method	Format	Parameters
<b>Total stock value</b> A single figure in your default currency, showing the total value of the stock you have in the store you are viewing the dashboard for.	<i>dashboard_rep_total_stock_value</i>	h2	None
Report	Method	Format	Parameters
<b>Transactions per store</b> Shows a table of the transactions per stores within 30 days	<i>dashboard_rep_month_transacs</i>	Table	store_code Specify a store by entering a store code, or leave blank for the default store
Report	Method	Format	Parameters
<b>Trends in critical stock</b>	<i>dashboard_rep_in_stock_trends</i>	Time series chart	store_id the ID of the store you're interested in, or no value for all stores
			critical_stock TRUE if you want to include items with this field checked, false for all items
Report	Method	Format	Parameters
<b>Unfinalised Stock transfers</b> Shows unfinalised stock transfers within the specified time period for each facility which matches the "store_tags" parameter. If no store tags are passed in, transactions are shown for all stores.	<i>dashboardReportUnfinalisedStock</i>	Table	store_tags Queries only stores with matching store tags
			days_older_than Queries transactions that were created 'x' number of days ago
Report	Method	Format	Parameters
<b>VEN items in stock</b> Shows stock on hand of each items that belongs to the VEN (Vital, Essential, Necessary) category	<i>dashboard_rep_item_ven</i>	Line or bar chart	store_code store code - if empty then default store is chosen
			ven_category V,E,N or E,N or V,N ..etc will filter the VEN items. If blank all visible items for the store are chosen

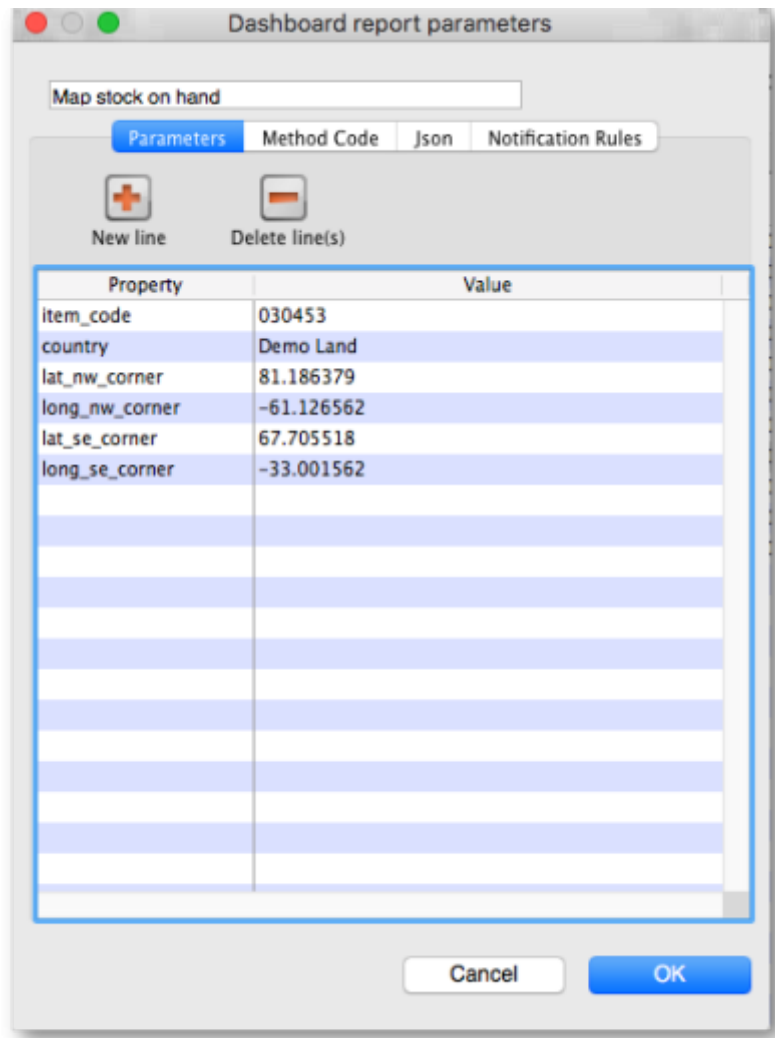

Report	Method	Format	Parameters	
<b>Vital items in stock</b> Shows a bar graph of the percentage of medicines of the chosen category in stock at each facility	dashboard_store_stock_percent	Bar chart	ven_category	v or e or n if you want to include items that are Vital or Essential or Necessary
			user_field_4	TRUE if you want to include items with this field checked
			user_field_7	TRUE if you want to include items with this field checked Note that the labels for fields 4 and 7 may be different, as they are set up in the mSupply preferences (misc tab)
			critical_stock	TRUE if you want to include items with this field checked, false for all items
			store_tags	entering healthcentre will only include stores with the "healthcentre" tag
Report	Method	Format	Parameters	
<b>Item Stock on Hand and Months Cover</b> Shows a table of item VEN status, Stock on Hand, Monthly Consumption, and Months Cover	dashboard_rep_stock_on_hand	Table	store_code	search for a single store matching this code
			lookBack_months	how many months of data to review when calculating; defaults to 6
			ven_category	V,E,N or E , N or V , N ..etc will filter the VEN items. If blank all visible items for the store are chosen. If not supplied the filter is not used; specify 'blank' to show items with empty ven. Note: each category in combination must be separated by comma, example: either v,e,n or v,e or v,n
			item_code	Searches for items matching this code
			customisation	Allows for a client customisation: currently supports MAM.

If you can't make a dashboard report that does what you want then please speak to us, it's usually a fairly simple matter for us to create one for you.

## Editing dashboard reports

Double-click a report in the list shown above and the following window will open:

- If there are any properties shown in the list, these can be edited to change what is displayed.
- To edit a property or value, click once to select the row, and then click again in the appropriate cell to edit it.
- To add or delete a row use the **New line** and **Delete line(s)** buttons at the top of the window.
- In the example shown in the screenshot above (a map report), the coordinates of two of the map corners and the item code of the item whose stocks will be shown on the map have been entered. Note that if you add extra properties to the default reports they'll be ignored.

## Exporting mSupply data to the dashboard

The mSupply Grafana dashboard has its own separate Postgres database to improve performance and prevent use of the dashboard slowing mSupply down. This means that the data for the dashboard must be exported from the mSupply database to the dashboard's database. You control the settings for this process by clicking on the *Export settings* tab of the window which is displayed when you click on the *Dashboard* icon on the *Admin* tab of the Navigator:

The screenshot shows a 'Dashboard' window with three tabs: 'Dashboard Reports', 'Dashboard Tab', and 'Export Settings'. The 'Export Settings' tab is active. It contains a 'Postgres Server' section with fields for 'Server' (localhost), 'Port' (5432), 'User', 'Password', and 'Database name' (dashboard). A 'Test connection' button is to the right. Below is the 'Export Settings' section with an 'All/None' checkbox, a table of tables to export, a 'URL' field (https://localhost:8080/), and a 'Next scheduled export' date/time (14/02/2022 3:26 PM). A 'Run Next Scheduled Export Now' button is below the date. At the bottom of the table section is a 'Full export of Checked Tables' button. The window has 'Cancel' and 'OK' buttons at the bottom right.

Table	Export
abbreviation	<input type="checkbox"/>
account	<input type="checkbox"/>
adverse_drug_reaction	<input type="checkbox"/>
aggregator	<input checked="" type="checkbox"/>
asset	<input type="checkbox"/>
asset_condition	<input type="checkbox"/>
asset_document_type	<input type="checkbox"/>
asset_property	<input type="checkbox"/>
asset_property_asset_join	<input type="checkbox"/>
asset_status	<input type="checkbox"/>
asset_type	<input type="checkbox"/>

## Postgres server section

Enter the details of the dashboard's Postgres server in here:

- **Server:** the URL of the server the database resides on
- **Port:** the port the database is being served on
- **User:** the username mSupply will use to login to the dashboard's database
- **Password:** the password ms will use to login to the dashboard's database
- **Database name:** the name the dashboard's database has been given in Postgres

Test connection button: when you have entered all the details in this section, click on this button to test the connection to the dashboard's database. mSupply will tell you whether the connection is successful or not.

## Export settings section

In the table select the tables in the mSupply database that you want to export to the dashboard. Care needs to be taken here; you need to choose all the tables that will provide the information you need in the dashboard but not those you do not need as this may impact on the speed of the export, and therefore how quickly your dashboard can be updated.

Use the **All/None** checkbox to quickly check or uncheck all the tables in the list.

The **URL** field shows you the URL that mSupply is exporting the data to.

**Full export of Checked Tables button:** Clicking this will force mSupply to empty the dashboard database and export all the data from the selected tables to the dashboard database.

**Run Next Scheduled Export Now button:** Clicking this will make mSupply immediately export to the dashboard database all the data that has changed in its database since the last export to the dashboard.

When these settings have been saved, mSupply will use them to automatically export the selected data to the dashboard according to the schedule that has been set.

August 2020: The remaining instructions on this page are for configuring mSupply's legacy web dashboard. This may still work, but is no longer supported as it has been superseded by the [mSupply Grafana web dashboard](#). The instructions are left here for historic reference only.

## Dashboard tabs

You set up Dashboard tabs which will display on your dashboard. Dashboard tabs are “containers” for one or more dashboard reports. To edit them click on the *Dashboard Tabs* tab of the window which is displayed when you click on the *Dashboard* icon on the *Admin* tab of the Navigator:

- The tabs themselves occupy their own space on the left of the window- they aren't considered when laying out the dashboard
- The first row has two reports- each report takes up half the row. So for the first report:
  - Row 1, Col 1, width 12 ("12" means it takes up the full width of the cell it is in- "4" would mean it would take up 1/3 of the width)
- For the report at the top right:
  - Row 1, Col 2, width 12
- For the map
  - Row 2, Col 1, width 12
- The next two reports are on the same row, but are divided into 5/12 and 7/12 of the width of the window, so we put them in the same cell but change the width settings:
  - Row 3, Col 1, width 5
  - Row 3, Col 1, width 7

## Adding a report to a dashboard tab

Click **New Line** to add a new report to the tab. Then edit the values in each column

- **Row:** The row it will be in
- **Column:** The column within the row- set to "1" if you don't have multiple reports on this row.
- **Report title:** The title that will show in the Orange heading bar for the report. Note that the same report can display different information depending on the parameters you set for that report- hence the need for the ability to customise report names
- **Type:** You'll need to know the appropriate type for the report you're displaying. The options are
  - bar\_chart
  - table
  - pie\_chart
  - time\_series
  - map
  - line\_chart
- **Width:** The fraction of the cell width in "twelfths" that this report will take up ("6" will make it take up half the cell width)
- **Report:** Choose the report name from the drop-down list of available reports

## Configure users to have access to dashboards

Once the tabs have been setup you have to choose which users will see which tabs. You do this in individual users' settings. For instructions on how to do this, see:

- [Managing users > General tab > Users can:](#) (Use the Dashboard permission)
- [Managing users > Dashboard tab](#)
